Beaver Builder

Web · https://tlc.wvnet.edu/docs/web-web-application-support/web/beaver-builder/

Beaver Builder is a page builder **plugin** and **theme** for WordPress.

Features:

- Content Modules
  - HTML, Photo, Test Editor, Audio, Video, and Sidebar

- Full-width, column based layouts
- Lightweight and semantic markup for maximum performance
- Mobile friendly, responsive layouts
- WordPress Widgets and shortcodes

Modules

All features are drag and drop. Drag to the the page and fill out the popup block.

Standard Modules

PowerPack Modules (Beaver Builder Add-on):

Drop and drag features.

Widgets:

Blocks of content that can be added to your site's sidebars, footers, and other areas.

After dropping a widget on your page you will see the following window. Fill in the form information and click save.

Rows /Columns

Click and hold down the mouse button and drag row selection to the area on the page where you would like to have the row placed.

After dropping the row(s) on the page, a rectangle block will popup. From here you can add any options you would like to see on your page.

Blue box: Starting at the left. Move Text Editor Settings Duplicate Edit Columns Remove You can also drag a text editor Module into the block

Templates

Templates and Landing Pages can also be changed from this window.

From this window you can see what you have saved in Rows/Columns and Modules.
